2018/2019 WINTERIZATION SERVICE – PRICE LIST**

The winterization of your engine, outdrive and/or generator consists of: Draining the block, running antifreeze through the engine, fogging engine (carbureted) cylinders, lubricate grease fittings and checking outdrive lube at drain plug (when accessible). Closed cooling systems will be checked to ensure proper antifreeze levels. All engines will be filled with at least 4 gallons of antifreeze. Generators will be filled with at least 1 gallon of antifreeze. (Non-toxic antifreeze protection to at least minus 50 degrees will be used.) Stabilizer will be added to fuel to prevent separation. Fuel tanks should be at least ¾ full before winterization. Dewinterization procedures vary depending on boat and are included as part of the winterization service, free of charge.

Prices below are for labor only. There will be an additional charge for materials.

SPECIAL PACKAGES (please select)
